

R&L Enterprises Is proud to announce the
***PyroBlaster* Electronic Firing Control**

The *PyroBlaster* has the ability to fire as many as 4096 cues, using up to 256 strips each able to connect up to 16 shots.

Each position can be checked for continuity prior to firing the show, with open or short indicators on the strips. This takes all of the guess work out of setting up. The control head also reports which hub, strip and terminal address has a fault (open or short).

The *PyroBlaster* can be programmed two ways:

- 1) Download a cue file from your PC or
- 2) Program it from its own built-in keypad

The *PyroBlaster* has multiple ways to fire:

- 1) Automated (timed) fire, great for choreographed shows with music
- 2) Sequential fire, single push button for each shot or pre-timed effect
- 3) Manual fire, select a cue address on the keypad and press the fire button.
- 4) Reverse firing (sporting events) salute the home team for each score and shoot any leftovers with the finale in the post game show.
